

## General Chemistry Credit by Examination

### CHEM 106 General Chemistry II

[www.chem.wisc.edu/content/credit-exams](http://www.chem.wisc.edu/content/credit-exams)

CHEM 106 is the lecture only equivalent of CHEM 104 General Chemistry II, the second semester in a two-semester sequence in general chemistry. CHEM 106 is not available for general enrollment. Rather it is used for the purposes of awarding transfer credit or credit by examination.

#### Eligibility Requirements

It is expected that students who elect to take the CHEM 106 credit exam have already acquired knowledge and competency in General Chemistry from other experiences. As specified in the campus policy, a student must be classified as a degree-seeking undergraduate. They must be in good academic standing with no holds on their record. The exam may be attempted only one time.

To be eligible to take the CHEM 106 credit exam, students must:

- Satisfy math prerequisite, which is MATH 112, 114 or 171 or placement into MATH 211 or 221.
- Have credit for the equivalent of CHEM 103 as well as some other college level chemistry credits.
- Not already have credit for CHEM 104, 106, 109, or 115.
- Not be enrolled or previously enrolled beyond the add deadline in CHEM 104, 106, 109 or 115.

Students need approval from the chemistry advisor to take the CHEM 106 exam. Having AP or IB credit for CHEM 103, or passing the CHEM 105 credit exam, does not make a student automatically eligible to take the exam. Students with CHEM 103 credit from an AP exam are usually advised to take CHEM 109, if they meet the math prerequisite. Students who pass the CHEM 105 credit exam will be advised to take CHEM 104, although they may elect to take CHEM 109 instead. The following are some examples of situations for which a student might be a good candidate.

1. A student has transfer credit for CHEM 103 and for higher level chemistry courses, but the student is missing transfer credit for CHEM 104.
2. The student has college level chemistry courses that do not transfer directly equivalent as CHEM 104, but it appears as if the student might be well-prepared enough to proceed to the next level of chemistry.

#### Laboratory Requirement

The credit exam does not test laboratory skills, and therefore students do not earn credits for the laboratory component of General Chemistry when they pass the exam. Students who pass the CHEM 106 credit exam will be required to take CHEM 102 General Chemistry Laboratory II (the laboratory component of CHEM 104) in order to complete the General Chemistry sequence and to proceed to further chemistry laboratory courses. Specifically, enrollment will not be permitted in CHEM 311, 327, 329, or 344 without completion of the laboratory component. CHEM 106 and CHEM 102 together are equivalent to CHEM 104.

### Exam Dates

The exam will be offered each semester, typically right before the start of classes or during the first week of classes. Students are strongly encouraged to take the exam no later than the start of their third semester at UW Madison. Taking the exam early will help the student prevent delays in progression through their major and avoid complications with residency requirements.

**Dates:** Friday, June 16, 2017 at 9:00 AM  
Tuesday, September 5, 2017 at 1:30 PM  
**Location:** Room 1328 Chemistry

### Registration for the Exam

The cost of each exam is \$135. Registration and agreement to pay the exam fee are required prior to the exam date. The UW Bursar's Office will bill the student's account, irrespective of whether the student passes the exam. Students who register but do not show will be still be charged, unless they cancel at least 48 hours in advance by emailing [undergrad@chem.wisc.edu](mailto:undergrad@chem.wisc.edu). To register, go to [www.chem.wisc.edu/content/credit-exams](http://www.chem.wisc.edu/content/credit-exams).

### Preparing for the exam

The exam consists of approximately 40-50 multiple choice questions. It may also include a small number of free response questions. It is recommended that students review the material before taking the exam. Please see the [CHEM 106 topics list](#) for more information about the material covered. Additional guidelines are below.

- Students must present their UW-Madison photo ID at the time of the exam.
- Students will have two hours to complete the exam.
- Notes are not permitted.
- A scientific, non-graphing calculator is permitted. Graphing or programmable calculators are not. We have scientific calculators available for loan, if you don't have your own.
- A periodic table, physical constants, and relevant equations will be provided.

### After the Exam

A score of 75% is required to pass the exams. Students will be notified via email about the results. If they pass the exam, they will also receive instructions on how to enroll in the corresponding laboratory component of the course. A fee of \$135 per exam will be charged to the student's UW Bursar account, irrespective of whether the student passes the exam. The Registrar's Office will post test credits on the student's record.

### Questions

General inquiries about the credits exams, policies, or registration should be directed to [undergrad@chem.wisc.edu](mailto:undergrad@chem.wisc.edu).

Students seeking advising about their transfer credits and/or whether they are eligible for the exam should contact the chemistry advisor, Dr. Jeanne Hamers ([jhamers@wisc.edu](mailto:jhamers@wisc.edu)).
